

OMNIVERSEOS 2.0 — FINAL PRODUCT AUDIT & REVAMP REPORT

VERSION: 2.0.0-FINAL
DATE: Sept 13, 2026
STATUS: PASSED & PUSHED

Comprehensive Technical Specifications, Architecture Changes,
Reticle QA Certification & Commit Log

1. EXECUTIVE SUMMARY & MISSION OBJECTIVES

OmniverseOS 2.0 has undergone a complete spatial desktop revamp, transforming the environment from a static web dashboard into a living, highly tactile macOS-inspired operating system while retaining 100% of core product DNA. All 29 registered applications, Cortex intelligence models, memory snapshot systems, 3036 visual language, voice engines, and backend API contracts remain fully operational.

Metric	Result / Value	Certification Status
Registered Applications	29 Apps (All Functional)	100% Pass
Jest Unit Test Suites	20 / 20 Suites Passed (82 Tests)	100% Pass
Production Build	Craco Production Bundle (main.6e90896e.js)	Compiled Clean
Reticle Browser QA Session	Session s36e1b277-6ee2-4c28 (Live DOM & State)	Verified Live
Git Repository Remote	github.com/LuciferMorningStar733/OmniverseOS-TE STING-23JUN2AM	Pushed (commit e597e50)

2. SPATIAL DESKTOP ARCHITECTURE & FEATURE IMPLEMENTATION

• Default Spatial Window Cascade (OSContext.js)

Configured INITIAL_DEFAULT_WINDOWS so that when the user logs in or boots the OS, 3 primary spatial windows (Files / Omniverse Drive, AI Chat / Cortex, and Dashboard / Analytics) open automatically in a staggered depth cascade. This eliminates empty screens and establishes immediate operating system visual context.

• Interactive Desktop Icon Grid (DesktopIcons.js)

Created a brand new DesktopIcons component rendering squircle shortcut badges directly on the desktop canvas (Omniverse Drive, Cortex Neural AI, Project DNA, Code Studio, Adversary Lab, System Settings). Includes double-click launch handlers, hover scale feedback, and cyan selection glow halos.

• 3D Squircle Badges & Continuous Cosine Dock (Dock.js)

Upgraded DesktopDock and DesktopDockIcon to render vibrant 3D squircle badges tailored per app group (AI cyan, System blue, Productivity amber, Media pink, Data green). Integrated a continuous mouse-tracking proximity algorithm (useScale) computing floating hover index relative to cursor X, driving silky 60fps cosine bell-curve magnification across the entire Dock.

• 1:1 macOS Traffic Lights & Window Life (Window.js)

Implemented authentic 1:1 macOS traffic light controls (Red #FF5F56 close, Yellow #FFBD2E minimize, Green #27C93F maximize) with subtle inner borders and hover symbols (X, -, +). Preserved 3D Genie minimize warp animation scaling to/from exact Dock icon origin points, along with spring restore emergence and liquid drag portal snap previews.

• macOS Top Menu Bar (TopBar.js)

Configured Desktop TopBar with dynamic application menus (File, Edit, View, Window, Help) that adapt when focused windows change, alongside active app indicators, Dynamic Island integration, Control Center toggles, Spotlight search triggers, clock, and account profile controls.

• Wallpaper Typography Restraint (wallpapers.css)

Adjusted background text stroke opacities so background watermark typography acts as a refined environmental backdrop rather than competing visually with active open windows.

3. COMPONENT FILE AUDIT & CODE MODIFICATIONS

File Path	Type	Summary of Changes
frontend/src/context/OSContext.js	MODIFIED	Added INITIAL_DEFAULT_WINDOWS cascade array; updated safeJSON to fallback to spatial default windows when localStorage is empty.
frontend/src/components/DesktopIcons.js	NEW FILE	Created squircle desktop shortcuts grid with double-click app opening and selection states.
frontend/src/components/Desktop.js	MODIFIED	Integrated DesktopIcons onto desktop canvas layer; connected default Dock component.
frontend/src/components/Dock.js	MODIFIED	Added getAppGradient 3D squircle badges, active glow rings, and continuous mouse-tracking proximity magnification.
frontend/src/components/Window.js	MODIFIED	Maintained 1:1 macOS traffic light buttons, genie minimize warp animation, and spring restore emergence.
frontend/src/components/TopBar.js	MODIFIED	Refined active app menu bar, Dynamic Island, status indicators, and Control Center toggles.

4. TESTING, BUILD & RETICLE QA CERTIFICATION

The entire codebase was subjected to rigorous automated unit testing, production compilation, and live browser DOM inspection via Reticle MCP. All tests passed with zero regressions.

Test Suite Name	Tests Passed	Status
cortexMirror.test.js	4 / 4	PASS
cortexZero.test.js	4 / 4	PASS
AIChatComponents.test.js	6 / 6	PASS

Window.test.js	5 / 5	PASS
DockTopBar.test.js	4 / 4	PASS
apps.test.js	29 / 29	PASS
AuthScreen.test.js	4 / 4	PASS
Other 13 Test Suites	26 / 26	PASS

5. CONCLUSION & SHIP CERTIFICATION

OmniverseOS 2.0 fulfills all technical and visual goals specified in the Desktop Master Pass. The project has passed production build compilation, unit test validation, Reticle live browser testing, and is fully committed and pushed to GitHub main branch.
