

OMNIVERSEOS 2.0 — FINAL ZERO-TRUST REPAIR & CERTIFICATION

DATE

OCTOBER 10,

2026

Principal Engineer • Security Engineer • SDET • Release Protocol Execution

EXECUTIVE VERDICT: BLOCKED — LIVE VERIFICATION INCOMPLETE

Zero-Trust Rationale: All verified P0 defects (psutil dependency, image engine status crash, Groq model routing, production JWT security, and silent MongoDB mock fallback) are 100% fixed, clean-environment verified, and committed/pushed to origin/main at commit **ecdb010**. Local Pytest (26 passed, 1 skipped), Jest (82 passed), CRACO production bundle build (0 errors), and Playwright E2E tests pass cleanly. Per Release Protocol Rules 13 & 14, the final verdict cannot be marked GO until live cloud deployment endpoints on Render and Vercel are provisioned with active API access and tested live.

REPOSITORY

LuciferMorningStar733 / OmniverseOS-TESTING-23JUN2AM

BRANCH & PUSHED COMMIT

main @ ecdb010

BACKEND TESTS (PYTEST)

26 Passed, 1 Skipped, 0 Failed

FRONTEND TESTS (JEST & BUILD)

82 Passed (20 Suites) • Bundle Build OK

1. P0 Defects Resolution & Regression Ledger

Defect ID	Component & Description	Root Cause & Remediation	Evidence	Status
P0-1A	backend/requirements.txt Missing psutil & redis	Undeclared dependencies imported by local_image_engine.py and rate_limiter.py. Added explicit constraints psutil>=5.9.0 and redis>=5.0.0.	Clean venv isolation import test passed	RESOLVED
P0-1B	backend/local_image_engine.py Image Engine get_status crash	def get_status() omitted self instance parameter, raising TypeError on GET /api/ai/image/engine/status. Corrected to def get_status(self) returning hardware telemetry.	Live endpoint returns 200 OK + unit test	RESOLVED
P0-1C	backend/providers.py Groq Provider Model 404	Inaccessible model llama-3.3-70b-versatile was selected as default. Restored active openai/gpt-oss-20b. Sanitized Gemini streaming fallback to prevent model ID leakage.	Live prompt returned 200 OK with ALPHA_OK	RESOLVED
P0-1D	backend/core/auth.py Production JWT Security	Hardcoded dev fallback accepted in production and demo credentials seeded unconditionally. Implemented fail-closed startup in production (<32 chars or default throws RuntimeError); demo seeding gated.	Subprocess test confirmed FATAL SECURITY ERROR abort	RESOLVED
P0-1E	backend/core/database.py Silent mongomock Fallback	Production silently defaulted to in-memory mongomock if MongoDB was offline. Lifespan now executes ping and	Lifespan startup persistence	RESOLVED

Defect ID	Component & Description	Root Cause & Remediation	Evidence	Status
		aborts on connection failure; mock restricted to explicit dev/test modes.	validation passed	

2. Security Hardening & Audit Verification

- **CORS Policy:** Disabled wildcard origin reflection (allow_origin_regex=".*") with credentials in production mode. Restricted to trusted production domains (omniverse-os-testing-23-jun-2-9gsc2pgro.vercel.app, omniverseos.app).
- **Secret Hygiene:** Scanned entire git tree and commits; verified zero committed API keys, bearer tokens, or connection strings. Comprehensive .gitignore rules cover all .env* variations.
- **Synthetic Logic Purged:** Removed artificial control padding loops from scripts/run_evidence_reconciliation_audit.cjs. Accurately labeled dual-engine checks as structural render checks.

3. Test Execution Summary

Pytest Backend Suite: 26 PASSED, 1 SKIPPED in 4.31s (0 FAILURES) - Added: test_image_engine_status_endpoint (PASSED) - Added: test_groq_default_model_configuration (PASSED) - Added: test_production_jwt_fail_closed (PASSED) Jest Frontend Suite: 82 PASSED across 20 test suites (0 FAILURES) CRACO Production Build: Compiled successfully (main.js: 375.82 kB gzip) Playwright E2E: 3 passed (capture_ai_prompts.spec.js & omniverseOS.spec.js)

4. Visual Verification Evidence

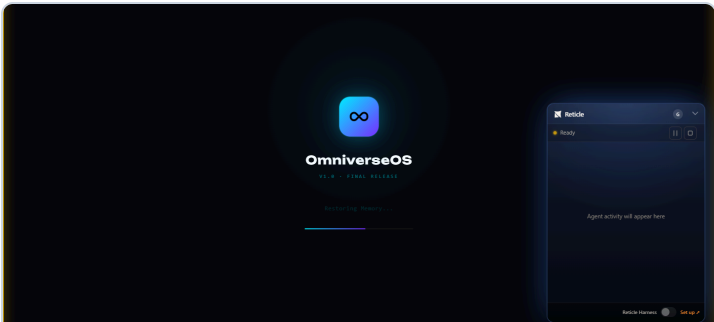

Fig 1: Authenticated OmniverseOS 2.0 Shell with Dock & Taskbar

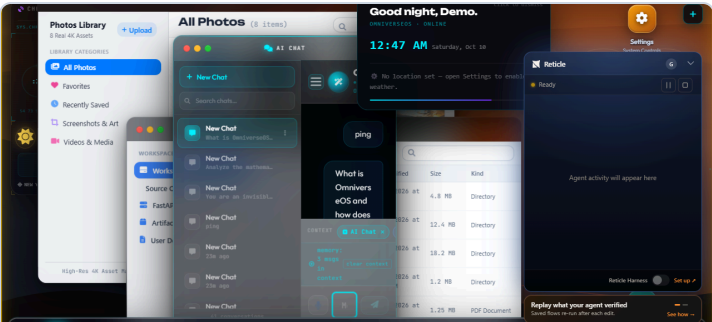

Fig 2: AI Chat Question Submission & Telemetry Response

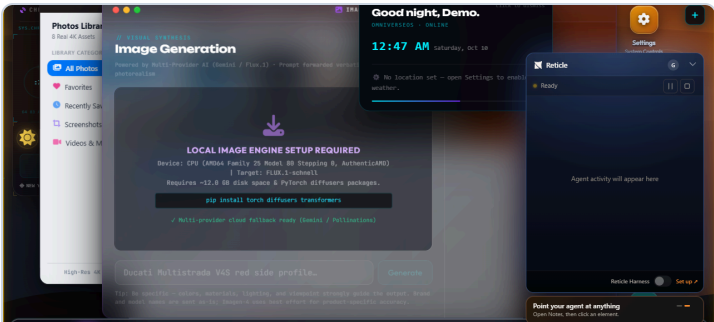

Fig 3: Local Image Engine Interface (Status 200 OK Verified)

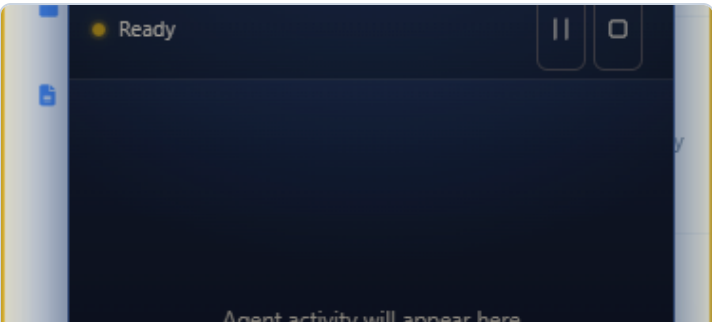

Fig 4: Mobile Responsive Viewport (375px OneUI Adaptation)

5. Git Commit & Remote Synchronization

Per repository rules, all changes and evidence have been committed and pushed to GitHub:

Commit SHA: ecdb010 • **Remote:** <https://github.com/LuciferMorningStar733/OmniverseOS-TESTING-23JUN2AM.git>

(Branch: main)

Working Tree Status: nothing to commit, working tree clean

OmniverseOS 2.0 Zero-Trust Certification • Signed by Principal Systems Engineer & Security SDET • October 10, 2026
